Consumer Price Index ◆ July 2008

Consumer Price Index (2002=100)

Highlights

- British Columbia's Consumer Price Index (CPI) rose 3.3% from July 2007, continuing its steady climb which began in February. The lowest inflation was seen in New Brunswick at 2.5%, while Prince Edward Island continues to post the highest inflation in the country at 5.3%. Nationally, prices rose 3.4% compared to a year ago.

- Among the metropolitan areas, Charlottetown recorded the greatest year-over-year increase in consumer prices (+5.1%) followed by St. John's (+4.2%). The smallest increase was seen in Winnipeg and Saint John (+2.6%). Vancouver's CPI rose 3.6% from July 2007, while prices in Victoria rose only 2.9%.

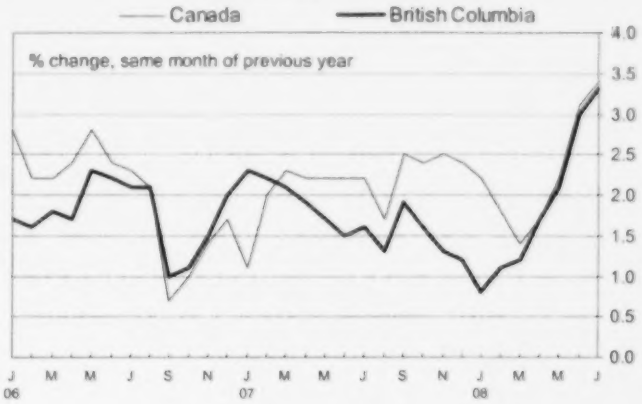
- BC's overall Energy index rose 24.0% from last July, mostly due to substantial price increases in fuel oil (+40.3%), gasoline (+31.5%), and piped gas (+20.7%). Piped gas prices had been relatively stable. Prices for bakery & other cereal products also rose significantly (+11.8%) along with fresh vegetables (+10.9) and children's clothing (+9.8%). Offsetting these increases were lower prices for reading material & other printed matter (-3.7%), women's clothing (-3.6%), personal care (-3.5%) and men's clothing (-2.7%).

- BC's All-Items CPI Excluding Energy rose 1.6% from July 2007. The comparable figure for Canada was 1.6%.

Note: Statistics Canada will release the August Consumer Price Index on September 23, 2008.

2002=100	All-Items Index	% Change from	
	July 2008	June 2008	July 2007
Canada	115.8	0.3	3.4
BC	114.2	0.5	3.3
Vancouver	114.7	0.7	3.6
Victoria	113.3	0.3	2.9
Core Canada[1]	111.7	0.1	1.5

BC and Canada Inflation Trend



2002=100	Latest 12-month Average Index (ending in July 2008)	Latest 12-month Average % Change	2007 Annual Average % Change
Canada	112.9	2.3	2.2
BC	111.2	1.7	1.8
Vancouver	111.6	1.9	2.0
Victoria	110.7	1.2	1.2

[1]**The Core CPI for Canada:** Defined by the Bank of Canada as the All-items index excluding the eight most volatile components (fruit, vegetables, gasoline, fuel oil, natural gas, mortgage interest, inter-city transportation and tobacco products). Also excluded is the effect of changes in indirect taxes on the remaining components.

Consumer Price Index—Terms and Definitions

Base Effect

The 12-month variation in the CPI is calculated by comparing the current month's index with the index for the same month of the previous year. The 12-month change is represented by the difference in the indexes of the reference months. Thus, the 12-month variation can decrease from one month to the next merely because the base serving as the point of comparison increased.

Source: Statistics Canada

Twelve-Month Percent Changes

Also referred to as "year-over-year", twelve-month percent changes compare indexes for a given month to indexes for the same month of the previous year. As they compare two points in time, they are influenced by unusual or temporary events that can affect either of the two months. Their calculation does not include any of the intervening monthly indexes.

Source: Statistics Canada

Annual Average Index

Annual average indexes are calculated by averaging index levels over the 12 months of the calendar year. These data should not be confused with the 12-month change in the CPI. By the nature of the calculation, averaging indexes over the calendar year gives a better representation of price behaviour over the whole year and is closer to the concept of an average price. The use of annual averages is considered the preferred option for indexation purposes.

Source: Statistics Canada

Latest Twelve-Month Average Index

The latest twelve-month average index (ending in the current month) is a 12-month moving average of the indexes of the most recent 12 months. It is calculated like the annual average index. Hence, in theory, the December twelve-month average index would be equal to the annual average index for the calendar year. However, in practice, when BC STATS makes these calculations from published data, the December 12-month average index may differ from Statistics Canada's published annual average index due to rounding.

Excerpt from Statistics Canada's "The Daily", Tuesday, June 19, 2007

Note to readers

. . . Statistics Canada has updated the Consumer Price Index (CPI) to reflect changes in the spending patterns of Canadian households.

The update, which occurs periodically, is designed to ensure the CPI's reliability for three key purposes: a measure of inflation, a statistical series deflator, and a tool for indexing various payments and transfers.

With this updated basket, the 12-month change in the all-items index was 0.1 percentage points higher than its movement would have been based on the 2001 basket. This increase reflects the updating of weights and the introduction of new goods and services into the CPI.

The weights of various items in the basket of goods and services used to calculate the index have been updated from 2001 to 2005. In addition, the CPI base year (the period for which the value 100 is assigned to the index) has changed from 1992 to 2002.

Users should note that the changeover to the base year 2002=100 will in no way alter rates of changes measured for previous periods, barring rounding.

The weights for the various components of the basket of goods and services are being updated on the basis of the most recent Survey of Household Spending (SHS). The update ensures that the CPI reflects any changes in the consumption patterns of Canadians.

The weights between January 2003 and mid-2007 are based on 2001 consumption patterns. The new basket is based on patterns obtained by the 2005 SHS.

July 2008 Consumer Price Index (2002=100)
